

Product properties

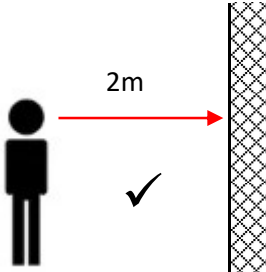

WERZALIT Seleкта façade profiles are weatherproof coated molded parts made of wood chips, which are manufactured using the WERZALIT process. The product meets the requirements of the EN 13986 standard for a wood-based material for use as a non-load-bearing exterior component.

The profiles are flexible so that irregularities can be compensated for during installation. This ensures that a uniform joint pattern is created during installation.

The WERZALIT installation instructions must be observed for installation!

Product requirements

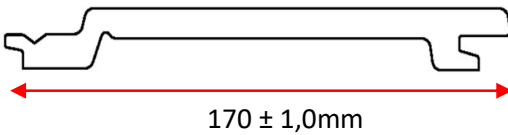

Surface quality - visible front side facing the viewer

2m

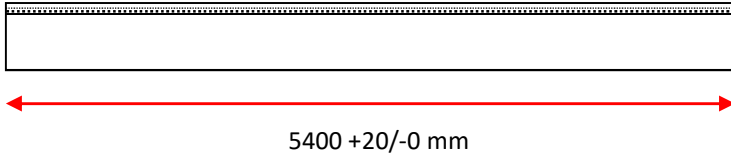

Flawless appearance, installed on the object, at eye level, from an observation distance of 2 meters.

Profile width

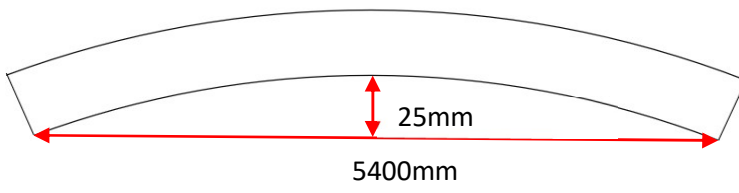

170 ± 1,0mm

Length

5400 +20/-0 mm

Warping

25mm

5400mm

Backside Due to the manufacturing process, a backing paper is required on the back of the profile, which may have small cracks.
